During the International speleo-diving (or cave diving) expedition "**Rokina Bezdana**", on **July 15**, we

visited two objects;

Pasja jama (The Dog Pit)

, and cave

Mala Rokinka

. They are both located near a viaduct on the Zagreb-Split motorway, at the south exit of the Mala Kapela tunnel. The objective was to survey topographically both objects for the elaboration of maps.

Eszter Domina

,

Gabriela Koltai

and

Szofia Libor

from the

Hungarian SZKBE

, and

Marijana Jelić

and me (

Damir Pavelić

) from

DDISKF

participated in this action.

First, we visited Pasja jama – Dog's pit (the name was given to it as a memory of two dog corpses we had found there during our previous explorations of the pit).

PASJA JAMA / SZKRE I DDSKF U ZAJEDNIČKOJ AKCIJI

Idno jame sastoji se uglavnom od glinastog sedimenta, pomiješanog s smrvljenim stijenama. Također se na dnu nalazi i manja količina otpada, što je nažalost karakteristično za sve objekte u blizini naselja. Na slici s lijeva na desno su: Tomislav, Gabriela, Andras, Zoltan i Marijana

Voda je ostala samo na dnu sifona, koji je preuska za rotnjenje. Međutim, u jami postoje tragovi periodičnog dizanja razine vode, od nekoliko metara, što je zaključeno po plastičnim bocama i ostalom plutaćem otpadu, koji se nakupi zabiljezi u pukotine nekoliko metara iznad.

After my father's death, I was able to take the school I had wanted, but it's essential to be a student

PASJA JAMA: POVRATAK PREMA IZLAZU

Jama je oštraste građe, a pri dnu ima zvonolik izgled, te se širi u veliku dvoranu. Izmjerena dubina vertikalnog dijela je 42 metra, dok je dubina cijele jame 48 metara.

PASJA JAMA: MOTIV

U istraživanju Pasje jame tijekom MSRE Rokina bezdana, uzeti su biospeleološki uzorci, iznova je fotografirana, a napravljeni su i nacrti (uključujući Mala Rokinku).
Mjesto su: Damir Pavelić, Marijana Jelić (DDISKF), Gabriela Kotai, Eszter Domina, Szofia Libor (SZKBE). Nacrt je izradio Damir Pavelić.

After the initial mapping of the cave system, the following data was collected: The cave system is a small, shallow, and narrow passage, with a total length of approximately 100 meters. It is located in the area of the Pasja jama (Dog's pit) and Mala Rokinka (Little Rokinka) caves. The cave system is a small, shallow, and narrow passage, with a total length of approximately 100 meters. MALA ROKINKA, ULAZ

Nalazi se u neposrednoj blizini Pasje jame. Radi se o špilji s velikim ulazom koji odmah prelazi u glavnu dvoranu.

Na rubovima te dvorane se nalaze mali uski odvojeci, kod kojih je moguće napredovanje kopanjem. U jednome od njih osjeti se strujanje zraka. Dno špilje je prekriveno kamenjem, koje je i zatrpalo sporedne kanale. Maja Rokšica je u fosilnoj stazi, uz tragove djelovanja vode na samom dnu, u obliku ostataka kaskadica. Dužina svih kanala je 87 metara. Na slici: Alan Milošević i Marijana Jelić (DDISKF) u poslovačju.
